Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- (Currently amended) A core for a printhead assembly, the core comprising:
 an extruded and elongated body having a plurality of interior reservoirs, the
 reservoirs each having an ink exit opening, the openings converging into an area
 adapted to receive a printhead which isvia bondeding to the area.
- (Original) A core according to claim 1, wherein:
 the body is a plastic extrusion.
- (Original) A core according to claim 1, wherein: the body is adapted to be at least partially encased by a shell, the body and shell when joined, having a coefficient of thermal expansion substantially the same as the printhead which the body is adapted to receive.
- 4. (Original) A core according to claim 3, wherein: the body includes a portion which protrudes beyond the shell, this portion receiving the printhead.
- (Original) A core according to claim 1, wherein:
 the body is internally subdivided by extruded membranes to define the reservoirs.
- (Original) A core according to claim 1, wherein:
 the reservoirs are four in number.
- 7. (Original) A core according to claim 3, wherein: the core and the shell have coefficients of expansion which are different than the coefficient of expansion of silicon, one of them having a coefficient of expansion which is greater than the coefficient of expansion of silicon and one of them having a coefficient of expansion which is less than the coefficient of expansion of silicon.

Appln No. 10/713,088 Amdt. Dated August 09, 2004 Response to Office action of June 03, 2004

3

- (Original) A core according to claim 1, further comprising:
 a modular pagewidth printhead comprising a plurality of silicon modules disposed along the length of the core.
- (Original) A core according to claim 8, wherein:
 each module is fabricated from silicon.
- (Original) A core according to claim 9, wherein:
 each module further comprises ink nozzles, chambers or actuators.
- 11. (Original) A core according to claim 1, further comprising: a shell, the shell being a longitudinal laminated structure defining an interior space, formed from layers of at least two materials; the layers being odd in number and disposed symmetrically about a central layer.
- 12. (Original) A device according to claim 11, wherein: two layers which are symmetrically disposed about the central layer are made from the same material and have the same thickness.
- (Original) A device according to claim 11, wherein: the shell further comprises a longitudinal gap adapted to receive a component of the printhead.
- 14. (Original) A device according to claim 11, wherein:
 the laminated shell is formed from at least three metals laminated together, the
 laminate having inner and outer layers which have the same coefficient of thermal
 expansion.
- 15. (Original) A device according to claim 11, wherein: the shell has outer layers which are made from invar.
- (Original) A device according to claim 11, wherein:
 each different material has a different coefficient of thermal expansion.

Appln No. 10/713,088 Amdt. Dated August 09, 2004 Response to Office action of June 03, 2004

- 17. (Original) A device according to claim 16, wherein:

 at least two materials have coefficients of expansion which are different than the
 coefficient of expansion of silicon, one material having a coefficient of expansion
 which is greater than the coefficient of expansion of silicon and one material
 having a coefficient of expansion which is less than the coefficient of expansion of
 silicon.
- 18. (Original) A device according to claim 11, wherein: two layers which are symmetrically disposed about the central layer have different thicknesses, the lateral cross section of the shell, in compensation, being configured to prevent bowing.
- (Original) A device according to claim 11, wherein:
 all of the layers are metal.
